(7 bodova) Zadani su dvodimenzionalni uzorci iz dvaju razreda za koje se pretpostavlja da slijede višedimenzionalnu normalnu razdiobu. Uzorci iz prvoga razreda su

 $\omega_1 = \{[1, 3]^T, [2, 0]^T, [2, 6]^T, [3, 3]^T\}$

Uzorci iz ω_2 imaju središte u ishodištu i kovarijacijsku matricu $C_2 = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$

Pretpostavlja se da su vjerojatnosi pojavljivanja uzoraka iz oba razreda jednake. Napišite jednadžbu granice između razreda i to u obliku:

$$a \cdot x_1^2 + b \cdot x_2^2 + c \cdot x_1 \cdot x_2 + d \cdot x_1 + e \cdot x_2 + f = 0$$
